Generation II Modem

Subject: New Dialup Modem used in Rowe and Merit/AMI Jukeboxes

Products Affected: MoD Box, NiteStar, StarBrite, StarBrite Lite, Solara, Jump Kit's and T2 Kit

Beginning May 23, 2006, Rowe International and Merit Entertainment started using a new model Generation II Dialup modem in their AMI Powered Jukeboxes. The new modem is a US Robotics model USR5670.

In order for this new modem to work in a dialup connected location, the AMI software must be at or above version 2.5.2.4. (To view go to Service mode, Diagnostic, System Info)

All connected jukeboxes have already downloaded the necessary software updates, and those hard drives have the new modem driver available to load via the software loader screen. If required, perform the following steps.

IMPORTANT NOTE: The Driver Software will not install properly unless the new modem card is installed in the core computer.

- 1) Go into service mode then select Location/System Setup
- 2) Select Advanced Administration and then select Load Software
- 3) Touch the Advanced button, and then touch the field that says D:\
- 4) Change the D:\ to read e:\devices\ (be sure to include the \ at the end)
- 5) Press Enter and then press the down arrow button
- 6) Choose the USR5670.cab file and then press load now

The modem driver will load and you are now finished with this step. Continue setting up your dialup connection as outlined in the Network Setup section of your Jukebox manual.

All new AMI hard drives produced after May 1, 2006, starting with serial number 107731, already have the modem drivers pre-installed. No further action is required for these drives to operate with the new modem. Simply setup your dialup connection as outlined in the Network Setup section of your Jukebox manual.

All Merit and Rowe Jukeboxes that are produced with the new modem installed are marked with an orange label on the carton to notify users of the new software requirement.

If you have any questions, please contact AMI Technical Support at 1-877-762-6765.
