Re: MoD BoX Motherboard Replacement

Please note that while early MoD BoX jukeboxes were manufactured with the same motherboard that is used in Ion games, there must be 256 MB of memory on the motherboard in order for it to function in the jukebox. If you are using an Ion motherboard as a replacement in your early MoD BoX game, make sure that the board has 256 MB of compatible memory. If the motherboard only has 128 MB, the jukebox will run very poorly.

If you have any questions, please contact Merit Customer Service and Technical Support by phone at 215-639-4700 or 800-523-2760, or by e-mail at TechCenter@meritgames.com.
