Re: Megatouch XL GOLD and Touchscreen Modes.

The Megatouch XL GOLD program has two new touchscreen options. The **Touchscreen Mode** settings are accessed through the set up screen.

Mode 1 is Standard (default) - It is the recommended setting for most locations. This setting allows for normal play.

Mode 2* is an added feature used for faster play and reaction time of the touchscreen. This mode is enhanced for intensive play.

*Certain environmental conditions may cause slight touchscreen drift. If this occurs, return to Mode 1.
