Re: Megatouch™ XL CD-ROM to Hard Drive Hardware Requirements

The XL CD-ROM to Hard Drive manual lists hardware requirements on the last page of the manual. When converting your Megatouch™ XL game from CD-ROM to Hard Drive, you must be operating at the XL6000 or Gold software level. If your game is not currently at this level you will need to upgrade the RAM and video RAM in your game, but you will not have to replace the *boot EPROM* as the manual stated. This only applies to the XL CD-ROM to Hard Drive conversion.

The last page of the manual should read as follows:

If your Megatouch™ XL game is not currently running Megatouch™ XL 6000 or Megatouch™ XL GOLD software, you will need to upgrade the RAM and video RAM in your game. Merit Industries offers the necessary hardware for this upgrade through the Megatouch Memory Upgrade Kit (KUV-107-027-01). Contact your distributor to purchase this hardware upgrade kit.

For DeAmeritek Motherboards - To operate the latest software, your game will require two (2) 16MB, 72-pin, 60ns, Fast Page DRAM SIMMS. You will also need one (1) 512 K, 40-pin SOJ, Video DRAM.

For Telco Motherboards - To operate the latest software, your game will require two (2) 16MB, 72-pin, 60ns, DRAM SIMMS. You can use *EITHER* Fast Page or EDO RAM.
